List of Actors Involved In System

- Ordinary User
- Registered User
- Database

Short Description About Each Actor

- Ordinary User: a user who is not registered in the system.
- Registered User: a user who has previously registered in a system. Receives some benefits.
- Database: Holds all the data for movies, accounts, and availability.

List of Possible Use Cases

- 1. Select Theater
- 2. Search Movie
- 3. Select Showtime
- 4. View Available Seats
- 5. Select Seats
- 6. Make Credit Card Payment
- 7. Cancel Ticket
- 8. Pay Account Fee
- 9. Receive Movie News
- 10. Manage Account

A Scenario for Each Use Case (Bold for Candidate Operations)

Select Theater

Scenario: John **selects the city and country** he is currently in. A list of nearby movie <u>theatres</u> are **displayed** to him. He **selects** which <u>theatre</u> he would like to **purchase** a <u>ticket</u> from then the <u>system</u> moves to the next step.

2. Search Movie

Scenario: This use case begins when the user has already **selected a <u>theatre</u>** and decided to proceed to **picking a <u>movie</u>**. John is shown a list of <u>movies</u> currently showing in the theatre he picked. John then **picks a <u>movie</u>** and proceeds to the next step.

3. Select Showtime

Scenario: This use case begins when the user has already **selected her <u>movie</u>** and decided to proceed to **choosing a <u>showtime</u>**. The system **displays** a list of available <u>showtimes</u> from the selected <u>movie</u>. He decides on a <u>timeslot</u> he is available to attend the <u>movie</u> and selects it. The <u>system</u> moves John to **view available seats** at that time.

4. Select Seats

Scenario: This use case begins when the user has already selected a <u>showtime</u> and decided to proceed to **picking a <u>seat</u>**. John is shown a list of available <u>seats</u> from the <u>showtime</u> he **picked**. He then **chooses** an available seat and the system moves to the next step.

5. Make Payment

Scenario: This use case begins when the user has already **select**ed a <u>theatre</u>, <u>movie</u>, <u>showtime</u>, and <u>seats</u> and decided to proceed to **paying for their <u>ticket</u>**. The <u>fee</u> is **charge**d to John's <u>credit card</u> if he is not **registered**. In case he is a <u>registered user</u>, the fee is **charge**d to his <u>account</u> instead. The <u>system</u> then moves to the next step.

6. Receive Ticket and Receipt

Scenario: This use case begins when the user has already **made their <u>payment</u>**. The <u>receipt</u> and the <u>ticket</u> are sent to John's <u>email</u>. This concludes the process of **booking a <u>movie</u>**.

7. Cancel Ticket

Scenario I: John is a <u>regular user</u>. This use case begins when the user has already finished **booking a** <u>movie</u>. John decides that he no longer wants to attend the <u>movie</u>. He views his online <u>ticket</u> and selects "Cancel Ticket". The <u>system</u> prompts him for a confirmation and requests for an optional reason for cancellation. John confirms he wishes to cancel and receives credit for the previous payment of his <u>ticket</u>. However, he must pay a 15% administration fee for the cancellation.

Scenario II: John is a <u>registered user</u> This use case begins when the <u>user</u> has already finished **booking a** <u>movie</u>. John decides that he no longer wants to attend the <u>movie</u>. He views his online <u>ticket</u> and selects "Cancel Ticket". The <u>system</u> prompts him for a confirmation and requests for an optional reason for cancellation. John confirms he wishes to <u>cancel</u> and receives <u>credit</u> for the previous <u>payment</u> of his <u>ticket</u>. The <u>system</u> adds John's credit to his <u>account</u> balance.

8. Pay Account Fee

Scenario: John is a registered <u>user</u>. To maintain his status as a <u>registered user</u>. John must **pay** an annual fee of \$20.00. He has an option where the fee is automatically **charge**d to the <u>cards</u> on his <u>account</u> every year. If this option is enabled, the fee is automatically **charge**d and John is notified of it. Else, the <u>system</u> **reminds him of this fee**. John can either **pay** to keep his status or refuse.

9. Receive Movie News

Scenario: John is a <u>registered user</u>. A perk as a <u>registered user</u> includes **receiving <u>news</u>** about upcoming <u>movie releases</u>. John has already **register**ed his <u>email</u> with his <u>account</u>. As new <u>movies</u> are released, <u>emails</u> will be **sent** to John **notify**ing him that he is able to **purchase** <u>tickets</u> before <u>regular users</u>. The option to **purchase** <u>tickets</u> will only be available if less than 10% of the available <u>seats</u> are already sold to other <u>registered users</u>. Otherwise, he will be notified of the regular release date and provided the opportunity to **purchase** a <u>ticket</u> at the same time as <u>regular users</u>.

10. Manage Account

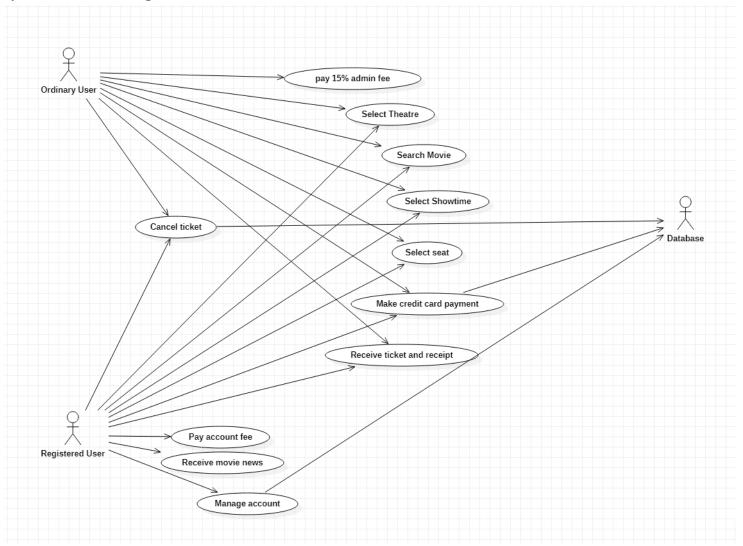

Scenario: John is a <u>registered user</u>. As a <u>registered user</u>, John has the options to **change any of his account information** including <u>username</u>, <u>password</u>, <u>address</u>, <u>credit and/or debit card</u>. If he wants to **update any of this information**. He can enter the new info and the <u>system</u> will ask him to **confirm his decision**. If he confirms, his information is changed. Else, nothing happens.

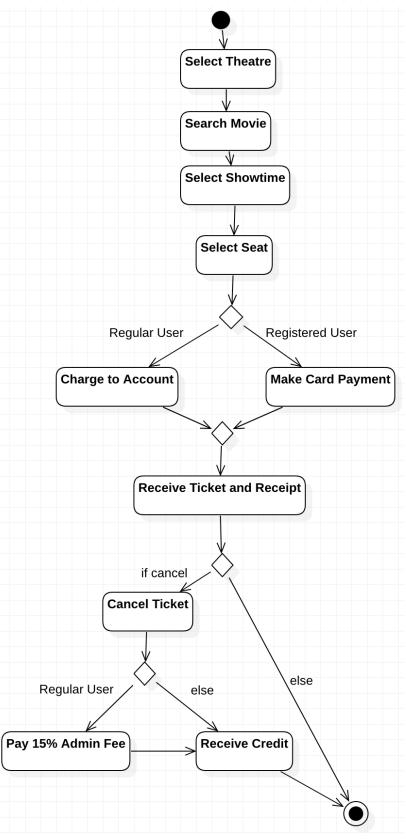

List of Good-Candidate Objects from Nouns Mentioned in Each Scenario

- 1. Select Theater
 - City
 - Country
 - Movie Theatres
 - Ticket
- 2. Search Movie
 - Movie Theatre
 - Movie
- 3. Select Showtime
 - Movie
 - ShowTime
 - Available Seats
- 4. Select Available Seats
 - Showtime
 - Available Seats
- 5. Make Payment
 - Fee
 - Credit card
 - Account
- 6. Receive Ticket and Receipt
 - Receipt
 - Ticket
 - Email
- 7. Cancel Ticket
 - Regular user
 - Online Ticket
 - Cancellation
 - Credit
 - 15% administration fee
 - Registered user
- 8. Pay Account Fee
 - Registered user
 - Annual fee
 - Account
 - Notification
- 9. Receive Movie News
 - Registered user
 - Movie Release
 - Email
 - Account
 - Tickets
- 10. Manage Account
 - Registered User
 - Account information

- Username
- Password
- Address
- Payment information
